QUESTION

What’s the simplest way to manage a Mac fleet with legacy apps at scale?

Managed Mac environments with Jamf

With Jamf, Macs are enrolled in MDM, centrally configured, and kept compliant.

- Inventory monitoring
- macOS configuration management
- macOS app management
- Software updates
- Security restrictions

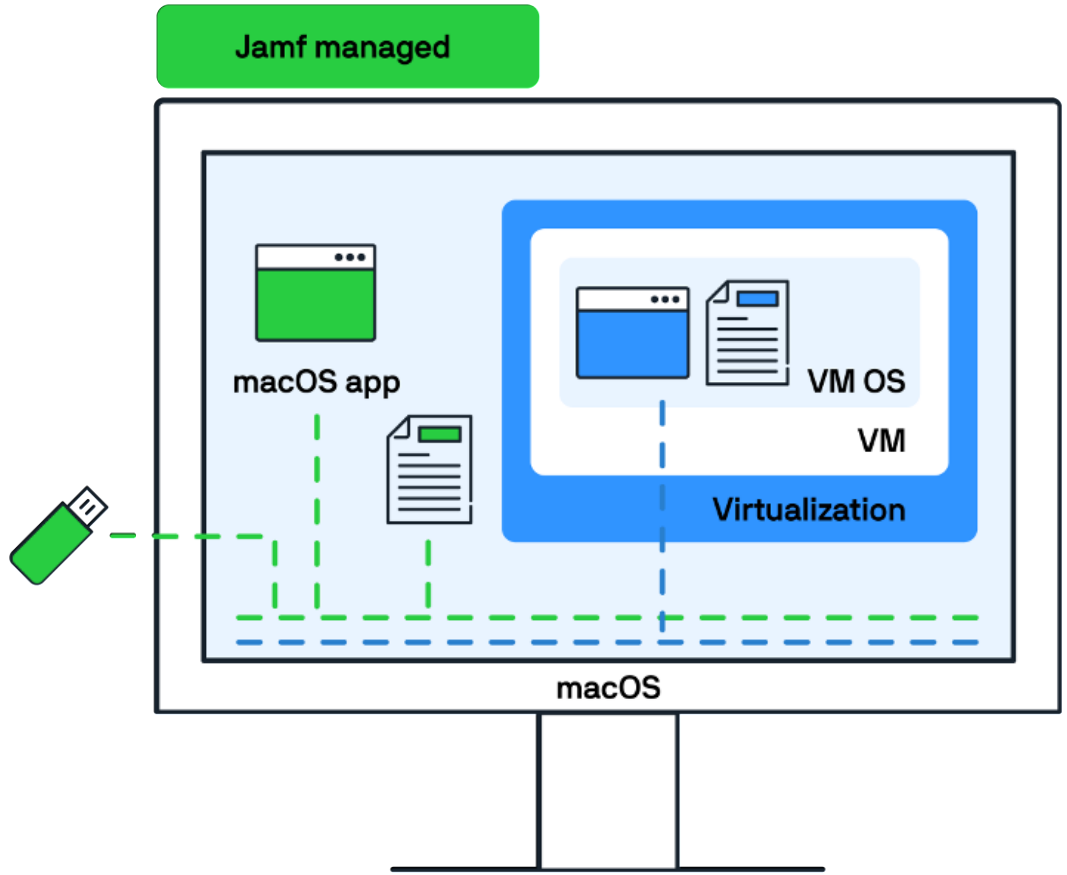

© 2025 Parallels International GmbH. All rights reserved

Risks of unmanaged local VMs

- Unmanaged VMs are not enrolled in MDM or covered by macOS policies
- Can connect to corporate networks and resources
- May store sensitive code, data, or IP
- Can interact with macOS host and external devices

With unmanaged virtualization software, users can bypass Jamf restrictions.

Levels of VM control offered by Parallels

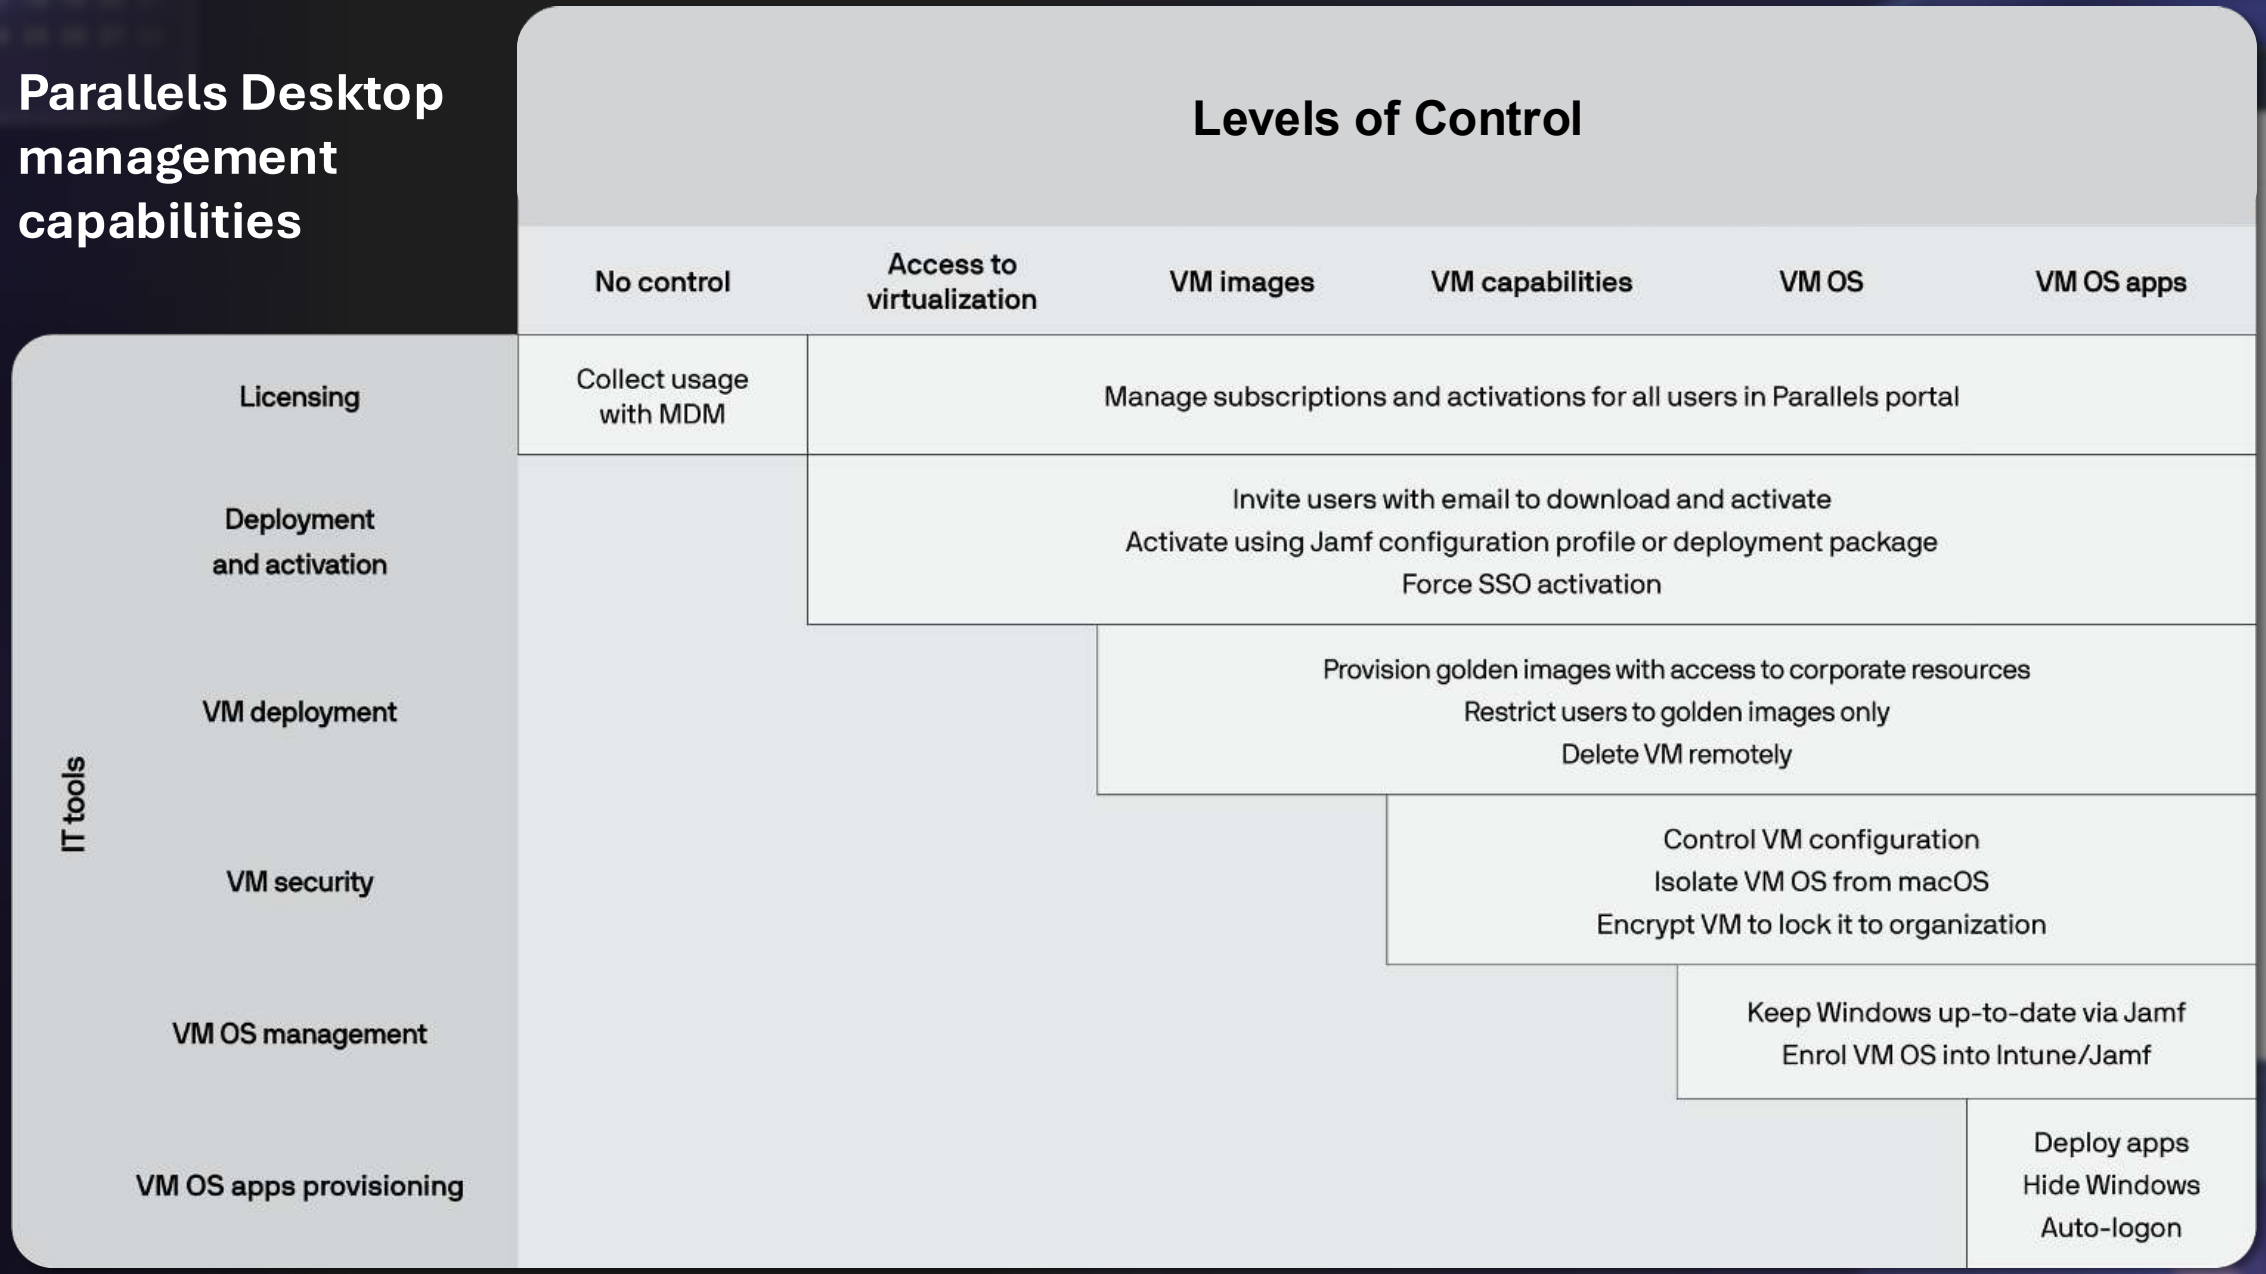

TAKE CONTROL OF YOUR VMs

From unmanaged access to individual app control, IT can choose the depth of oversight that balances security, flexibility, and user experience.

Integrations

Parallels™ + jamf PRO

Deployment

- ✓ App catalog deployment along with policies and golden images
- ✓ Config profiles for activation and SSO setup
- ✓ Custom packages for VMs or single Windows apps

Deploy Windows, macOS, and Linux VMs at scale

Management

- ✓ Enforce and monitor Windows updates inside VMs
- ✓ Keep users on specific Parallels Desktop versions
- ✓ Extension attributes and CLI tools for visibility

Ensure compliance and visibility across every VM
