Windows Apps run on Mac with Parallels Desktop

Mac Hardware
Their team's primary device

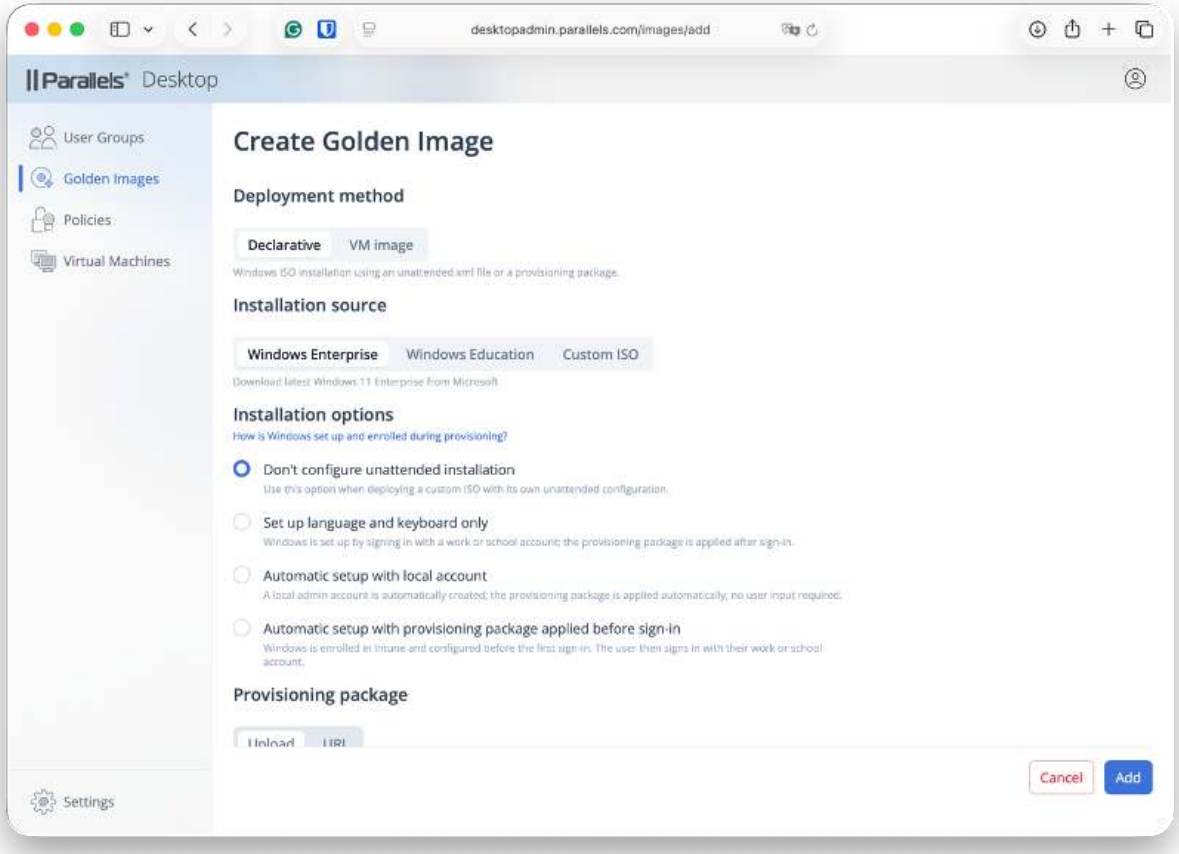

Windows-Only App
Runs directly in macOS

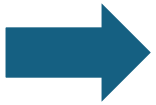

Parallels Desktop
The layer that makes this possible —
no reboot, no separate machine

VM Delivery: VM + OS + App

VM Delivery

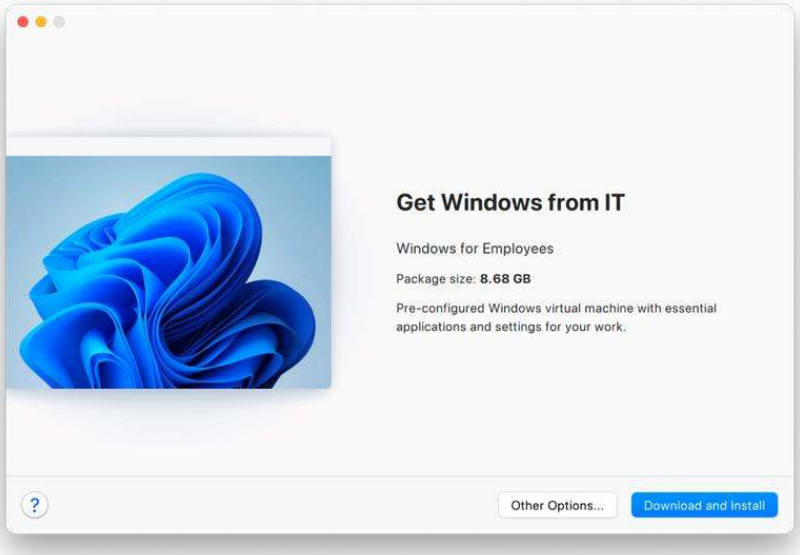

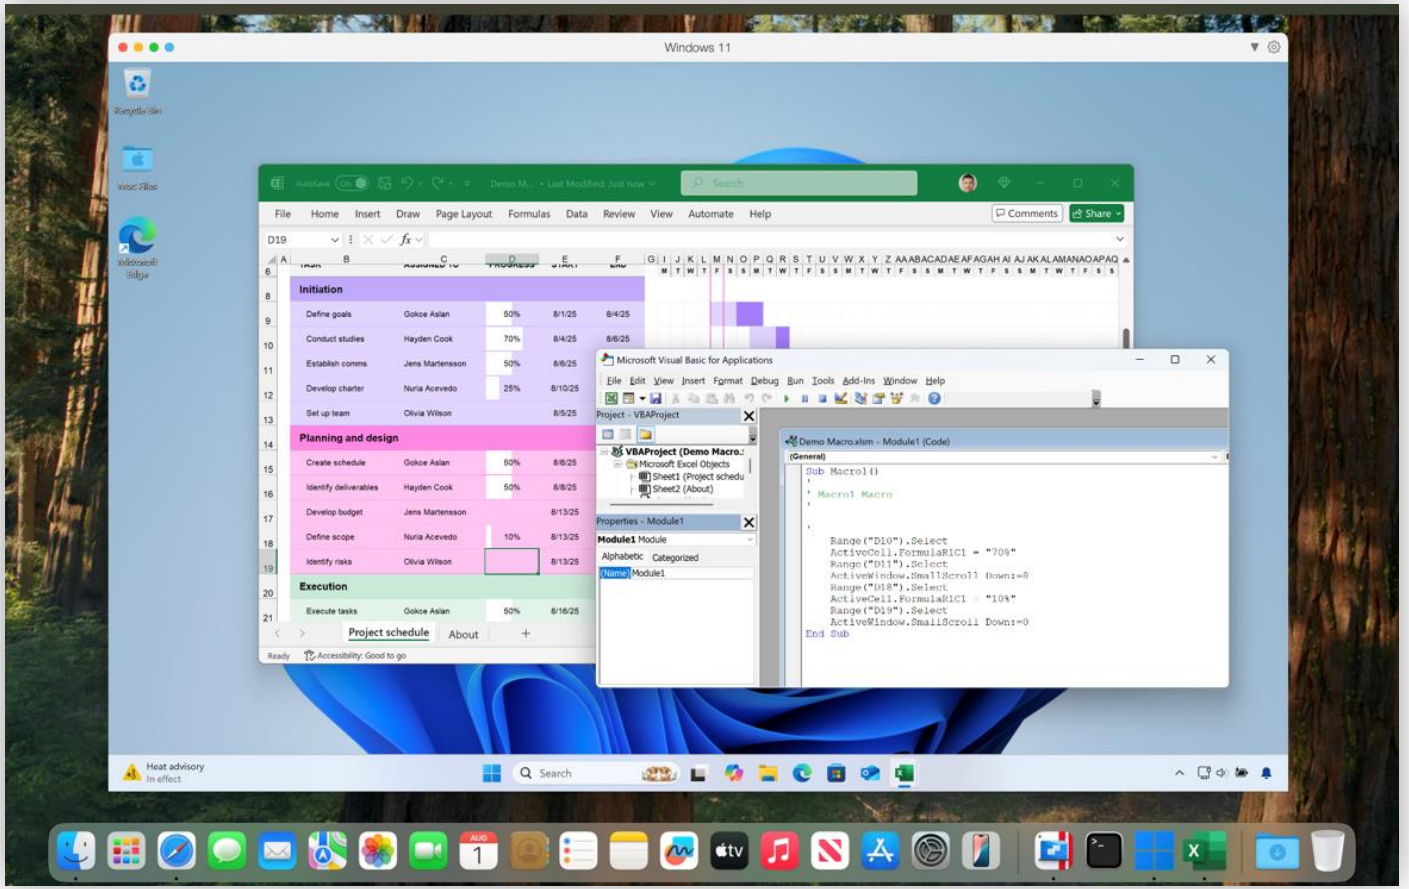

Admins must prepare a VM, think about managing PD and VM installations.

VM Delivery: VM + OS + App

VM Delivery

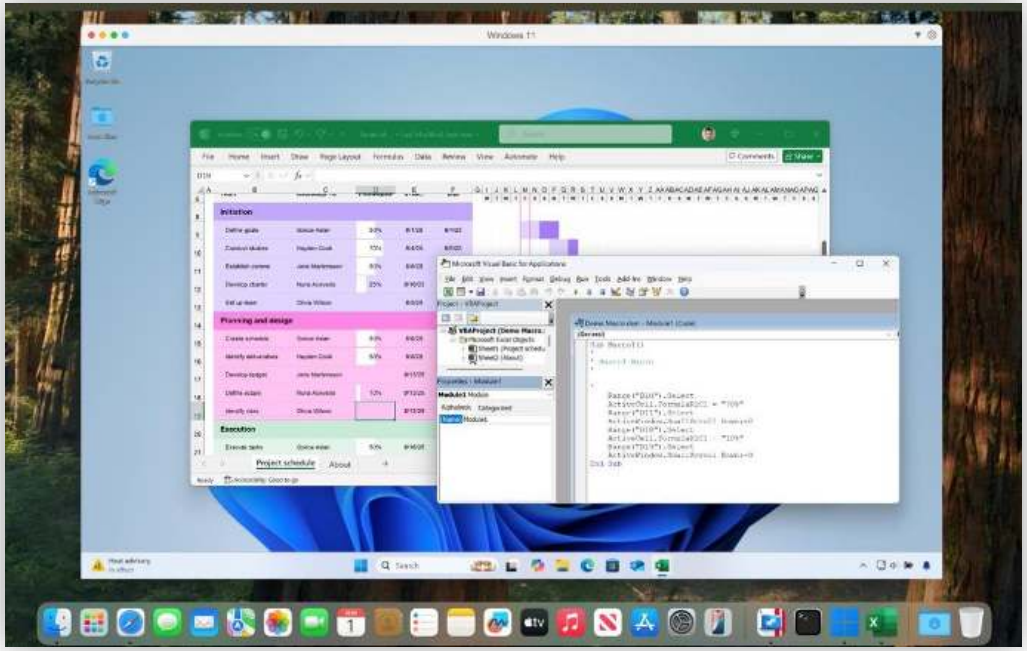

Users are often exposed to a whole Windows desktop — taskbar, Start menu, every app.

© 2026 Parallels International GmbH. All rights reserved.

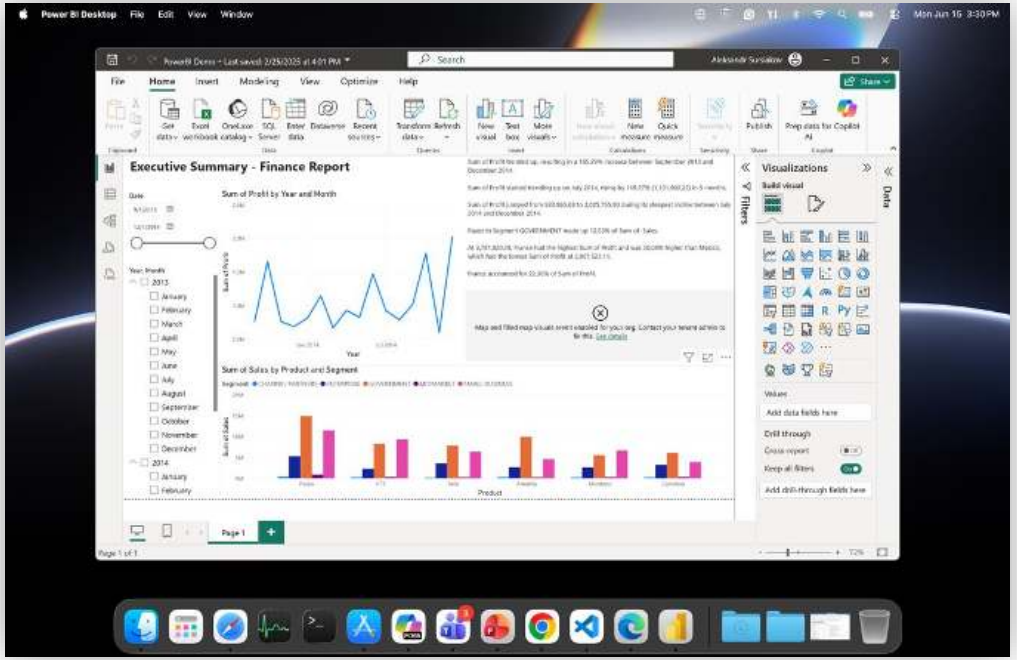

What if you could deliver the app experience?

VM Delivery

A whole Windows desktop — taskbar, Start menu, every app.
A second OS for the user.

App Delivery

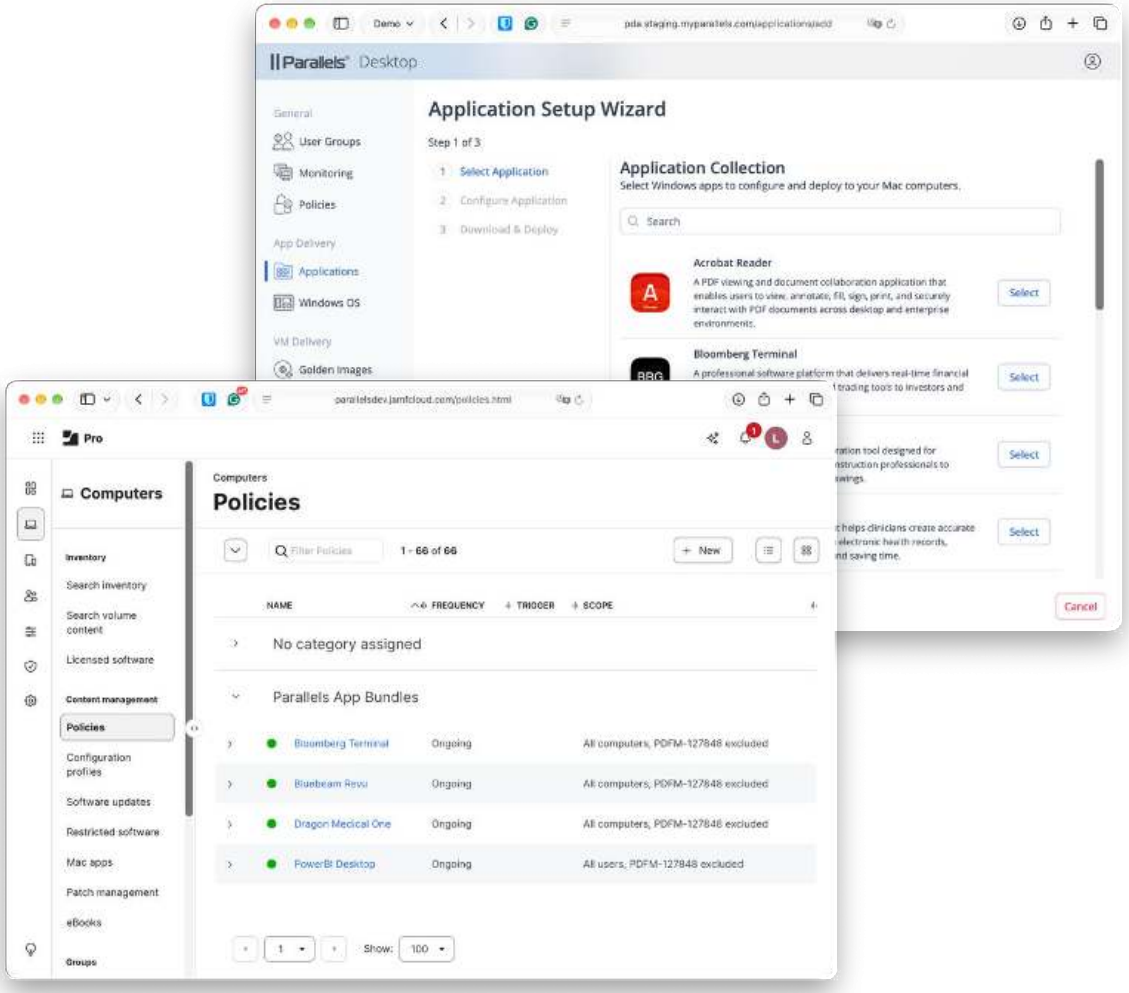

Just launch the PowerBI application. Like a native Mac App.
No Windows desktop — the VM runs hidden underneath.

APP Delivery: App package + MDM

App Delivery

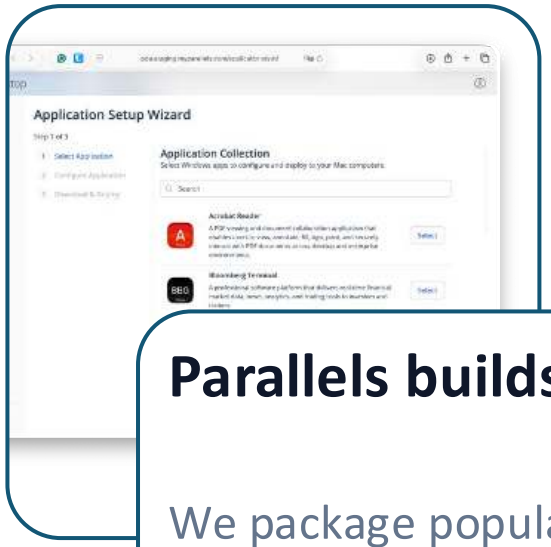

Deliver a Windows app through JAMF like any macOS app.
The package will take care of setting up the environment and the app.

Launch the Windows application like a native macOS App.
No Windows desktop — the VM runs hidden underneath.

Windows App Lifecycle

App Delivery

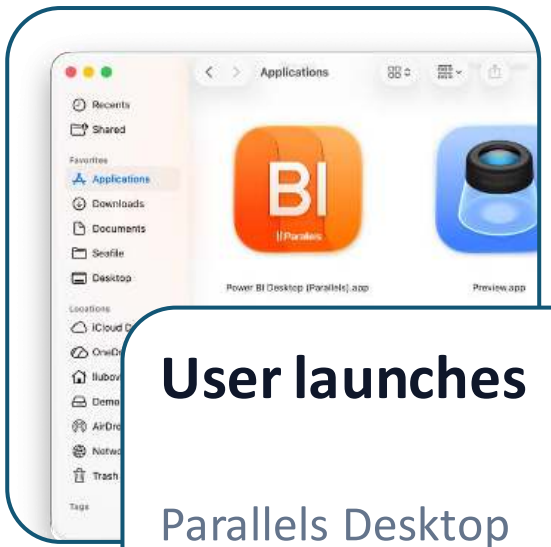

Parallels builds

We package popular Windows apps as Mac apps and publish them to the portal.

Admin deploys

You download the app package from the portal and deploy it through your existing MDM.

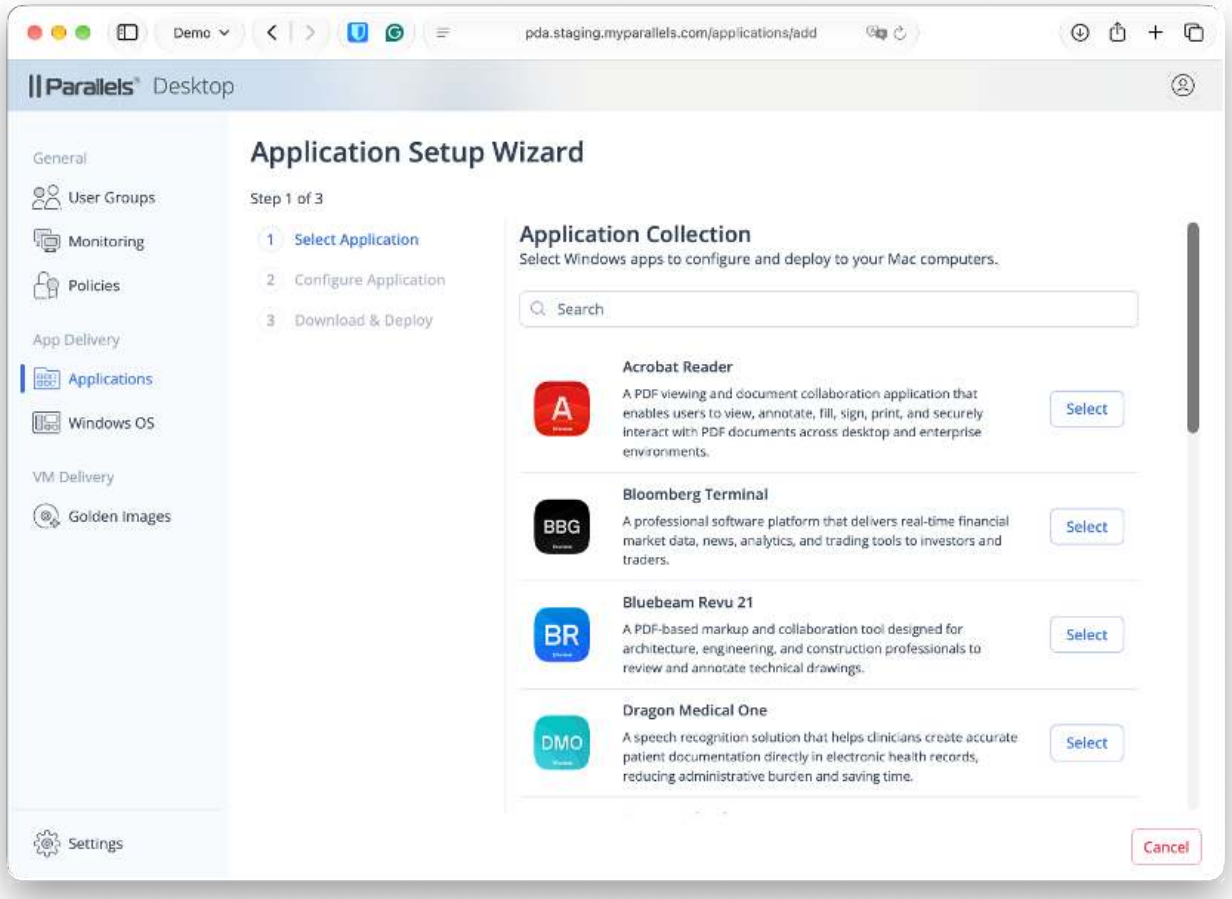

User launches

Parallels Desktop creates the VM, prepares Windows, installs the app, and starts it.

Application Setup Wizard

Step 3 of 3

1. Select Application
2. Configure Application
3. Download & Deploy

Power BI Desktop

Provider: **Microsoft** | Latest Release

A business intelligence and data visualization application that enables users to connect to data sources, transform and model data, and create interactive reports, dashboards, and analytics solutions.

Deployment Instructions

1. **Prerequisites:** Ensure target Macs have Parallels Desktop installed and activated. Learn how to deploy and activate Parallels Desktop through MDM.
2. **Download Assets:** Download the application package and MDM configuration profile. The Configuration profile includes app configuration ID that will be used to fetch your installation parameters from the portal.

   Configuration Profile | App Package
3. **Deploy:** Push the MDM Configuration Profile first, then deploy the .app package via policy in your MDM. The application will be automatically installed with the required settings.

Preference Domain: **com.parallels.appbundle.powerbidesktop** Copy

Configuration ID: **60f1b093-5cce-301e-66f9-c37e2e91f5bd** Copy

Managing the Windows Layer

Lockdown, activation, updates, and monitoring — for the admins who know what's really underneath.

Windows as a runtime, not an endpoint.

Parallels Desktop for Enterprise can now deliver Windows apps on Mac **without exposing Windows as a general-purpose OS.**

Core idea:
Given the isolation and lockdown, we believe the Windows layer may not require extra security tools or require far less involvement than an endpoint device. The existing macOS security posture and Parallels lockdown will provide a good coverage and protection.

Windows Lockdown

Minimize, secure, and hide the managed Windows installation

THE FOUR LEVERS

Performance

Stop indexing, Superfetch, P2P updates & telemetry timers

WSearch / SysMain → Manual stop background indexing and Superfetch pre-allocation.

DODownloadMode = 99 disable peer-to-peer Delivery Optimization bandwidth sharing.

CDPSvc / CDPUserSvc → Disabled kill Connected Devices Platform background activity.

NoDesktop · blank wallpaper · DisableSearch clean, distraction-free surface.

Suppress update & crash dialogs no user-facing interruptions during sessions.

Lockdown

Block shortcuts, Task Mgr, Control Panel; hide C:, bypass WinRE

NoWinKeys = 0xffffffff disable all Windows-key shortcuts (Win+R, Win+X, Win+D…).

DisableTaskMgr · NoControlPanel block Task Manager and Control Panel / Settings.

NoDrives = 4 hide the C: drive from Explorer and file dialogs.

Disable HKCU/HKLM Run · AutoRun off no unsupervised auto-start or autorun.inf vectors.

NoConnectedUser · IgnoreAllFailures local-account only; bypass recovery environment.

Bloat removal

Strip 32 apps, 12 capabilities, Edge & OOBE reinstalls

32 AppX packages deprovisioned Xbox stack, Bing apps, Store, Teams (consumer), Copilot…

12 optional capabilities via DISM WebView2, IE shim, WMP, PowerShell ISE, OneSync…

Edge actively removed scheduler, registry DACL, RunOnce uninstall command.

UScheduler OOBE queue cleared prevents reinstallation after imaging.

DisableWindowsConsumerFeatures = 1 no silently-installed promoted apps.

Privacy / Telemetry

Disable DiagTrack, appraisal, usage insights, health svc

DiagTrack → Manual disable the main Microsoft telemetry pipeline.

wuqisvc → Disabled stop Usage & Quality Insights data collection.

InventorySvc / whesvc → Manual halt inventory/compatibility appraisal & Windows Health.

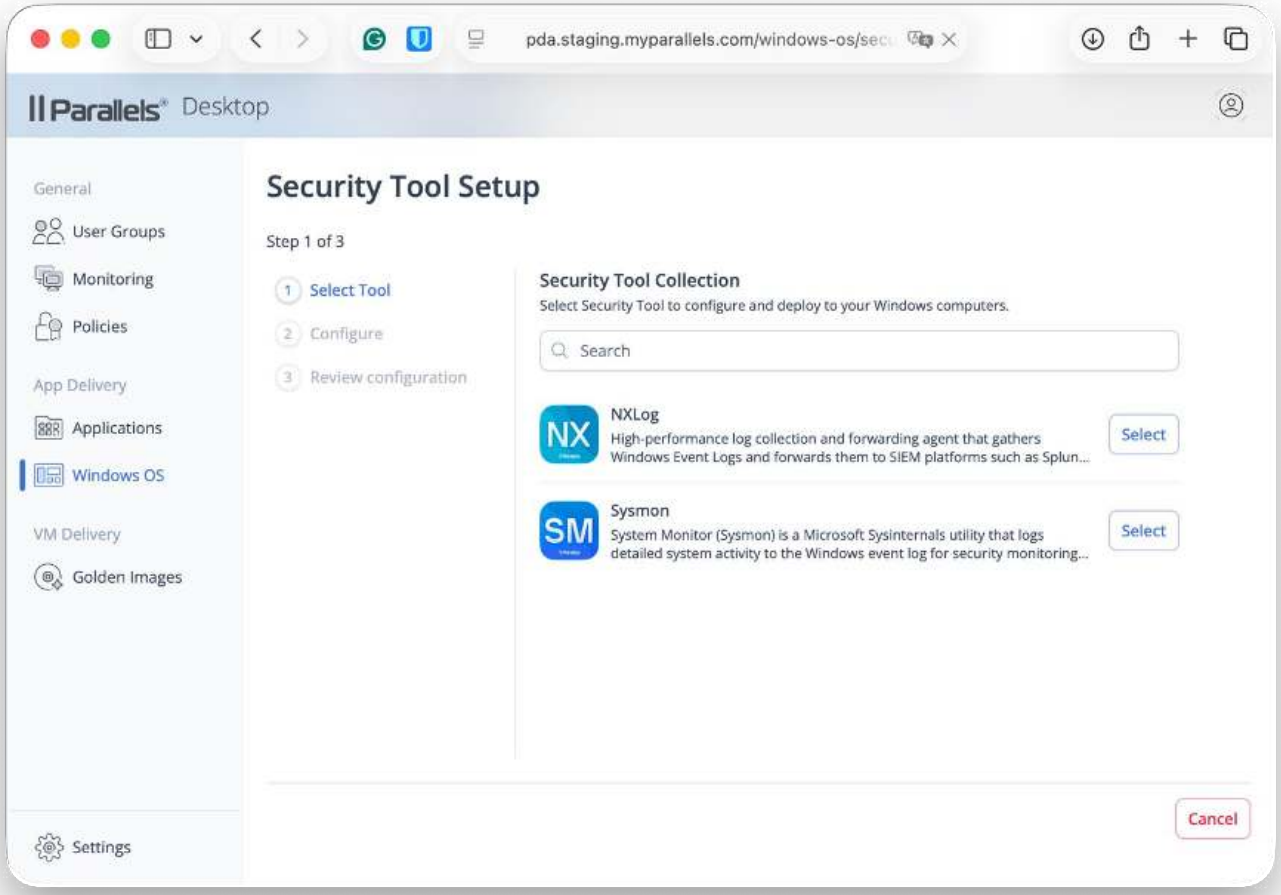

PcaSvc / DPS → Disabled remove Program Compatibility & Diagnostic Policy pipelines.

Feedback Hub removed no diagnostic data or feedback sent externally.

Windows Security Tools

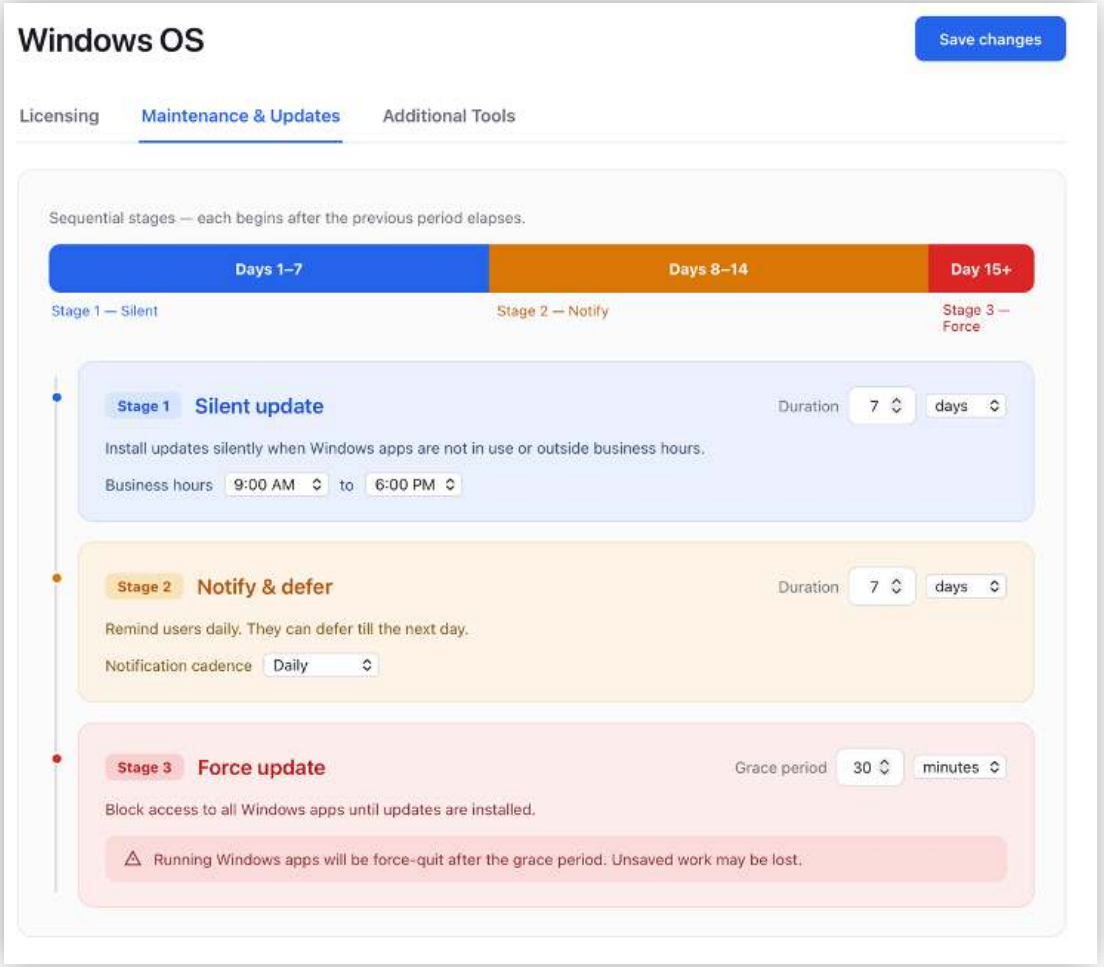

- **Configure in the Portal**
  Add third-party tools like Sysmon or NXLog with your own config files and install parameters
- **Deployed automatically**
  Tools install alongside your Windows apps at VM setup, or on next check-in if added later
- **Stays hidden from users**
  Monitoring runs invisibly, without surfacing in the sealed, app-only experience

Summary

New delivery model

Windows apps reach Macs as single apps, not full VMs to hand off

A native experience

Users launch apps from the Dock; Windows runs hidden underneath

No new tooling

Package and deploy through your existing MDM, like any Mac app

macOS stays the managed endpoint

Windows is a sealed runtime, not a second OS to patch or audit

Windows as a runtime, not an endpoint.
