

Parallels® Desktop for Mac

Vision and Strategy B2B segment

3 out of 4 large enterprises reported an increase in Apple devices in their use.

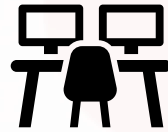

Reasons: secure, ease of deployment, ease of management, performance

55% of businesses now use Mac

Mac computers' enterprise market share increased from **17%** in 2019 to **27% in 2025**

Why would they need virtualization?

The need for Windows apps and cross platform experience

Allow BYOD and Contractors
(manage VM OS)

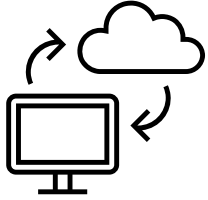

Provide multiple operating systems
(R&D, students, IT experiments)

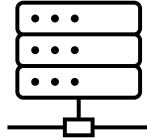

Enable knowledge workers with
legacy Windows app

Business Angle Competition

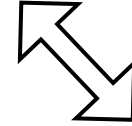

Cloud VDI

- ✓ Sophisticated management capabilities
- ✓ Multiplatform

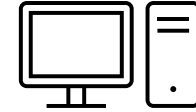

On-premise VDI

- ✓ Sophisticated management capabilities
- ✓ Multiplatform

On-device virtualization

- ✓ Free

Windows PC

- ✓ Native graphics performance

Parallels Desktop for Mac

- ✓ Lower Total Cost of Ownership
- ✓ No latency
- ✓ Better integration with Mac and benefits of macOS
- ✓ Simple UX for admins and end-users
- ✓ Tools for IT admins to deploy and manage at scale

Our Enterprise Customers

Total current PDE SKU customers: 130+

PDE SKU Sales: \$1,3M+

Software Developers

IT teams enable software developers as they don't require a locked env.
Great penetration by the current Parallels Desktop offering.

Contractors and BYOD

There is growing interest, driven by dissatisfaction with Citrix or Cloud, due to costs, complexity, latency and bad user experience.

Knowledge Workers

There is growing interest, driven by dissatisfaction with Citrix or Cloud, due to costs, complexity, latency and bad user experience.

Parallels Desktop Administrator's Goals

Admin's goals

- Enable users with a Windows  app(s)
- Provide controlled environment
- ✓ Enable users with multiple OSs with central management

Desired state

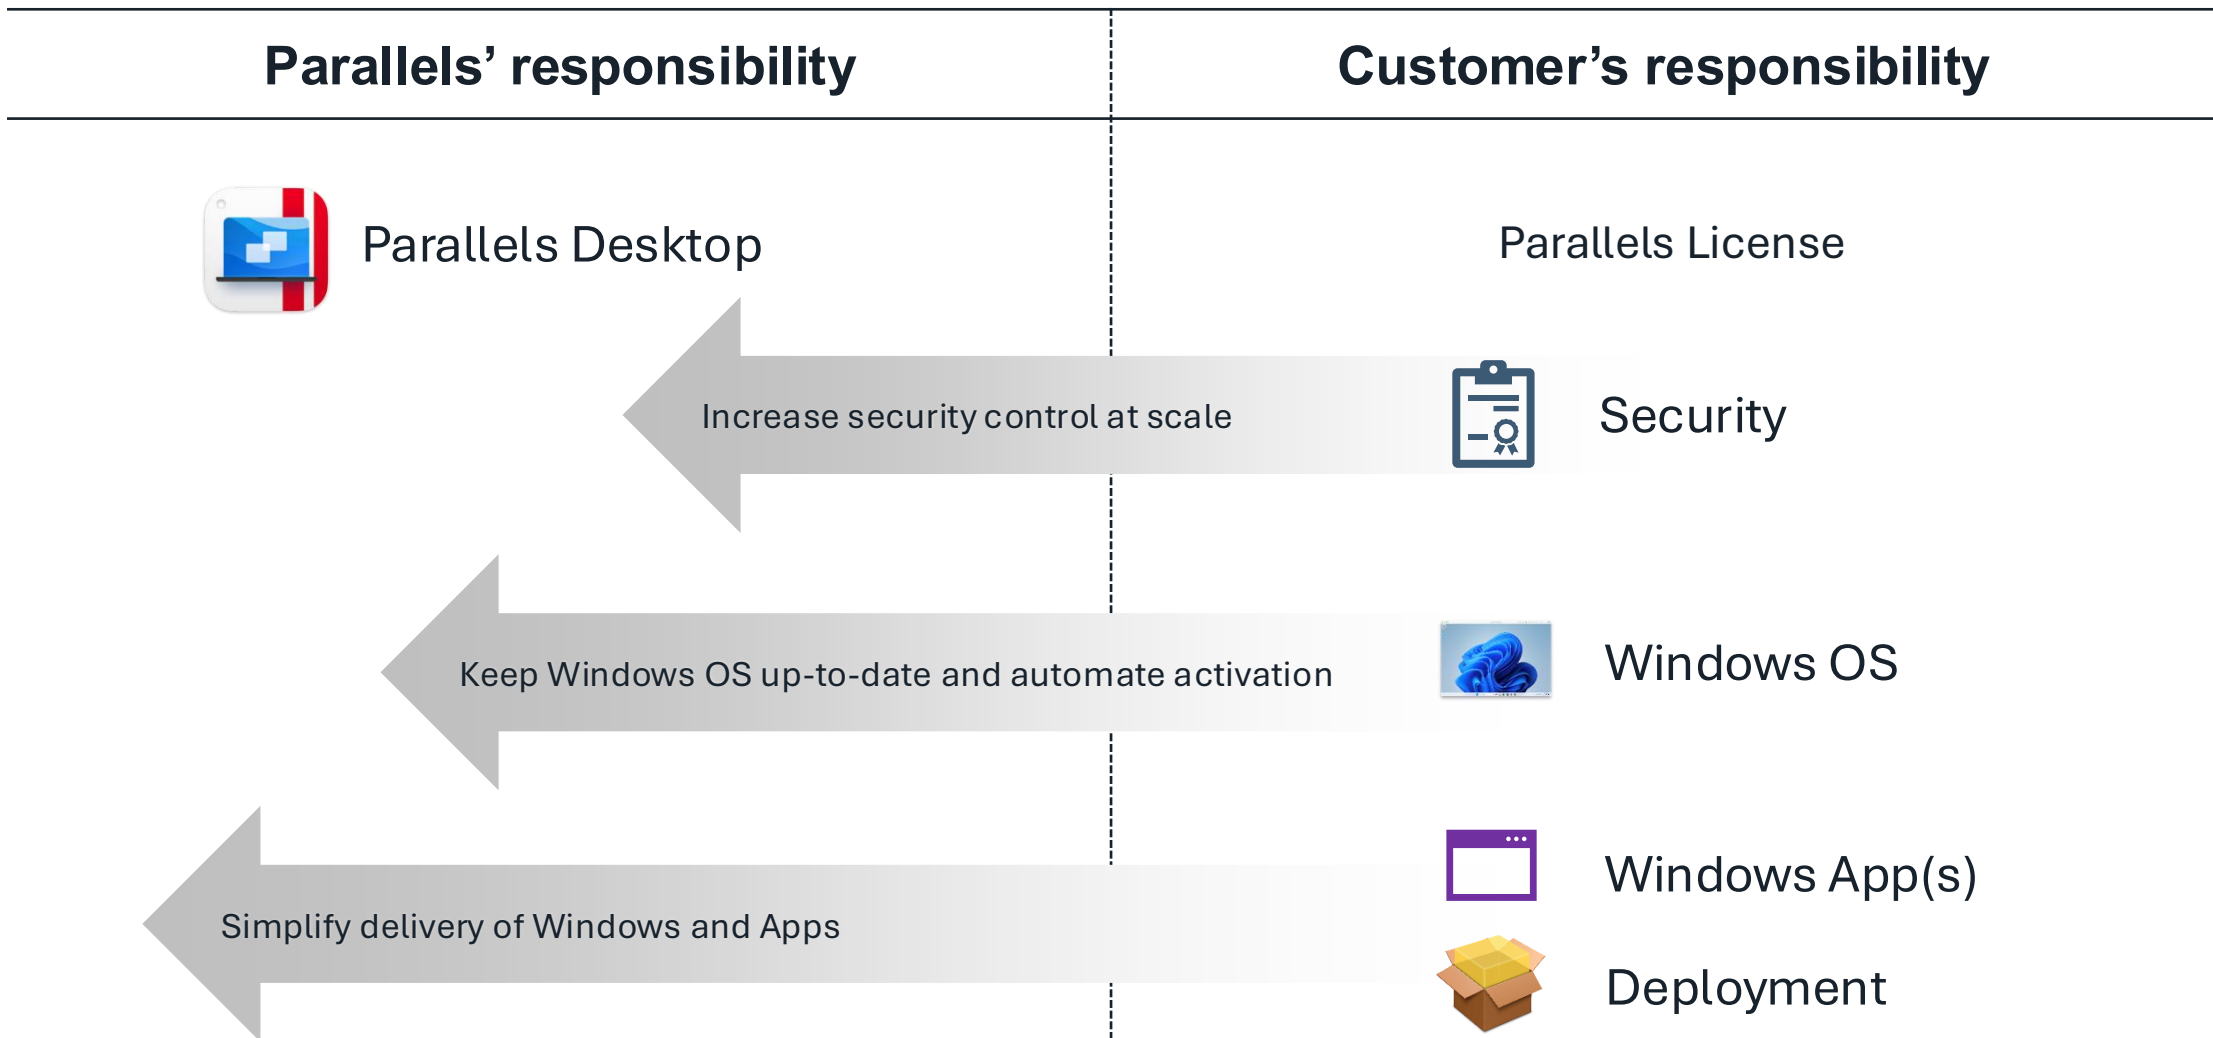

- ☐ Easy deployment
- ☐ VM management at scale
- ☐ VM OS security and compliance

Current State of Management Options

	Software Developers	Contractors/BYOD	Knowledge Workers
Parallels Desktop licensing	Volume License		SSO
Parallels Desktop deployment	MDM	Email invitations	MDM
VM OS deployment	Self-install	Golden Images by IT	Automatic Imaging by Parallels
Security	Policies (e.g., create new VMs/ integration levels)		Per app policies?
		VM Encryption	
VM OS management	Unmanaged	3rd party solution (e.g., Intune)	Automatic updates and activation by Parallels
Virtualized apps	3rd party solution (e.g., Intune) or Golden Image		App package deployment

Simplification and Responsibility

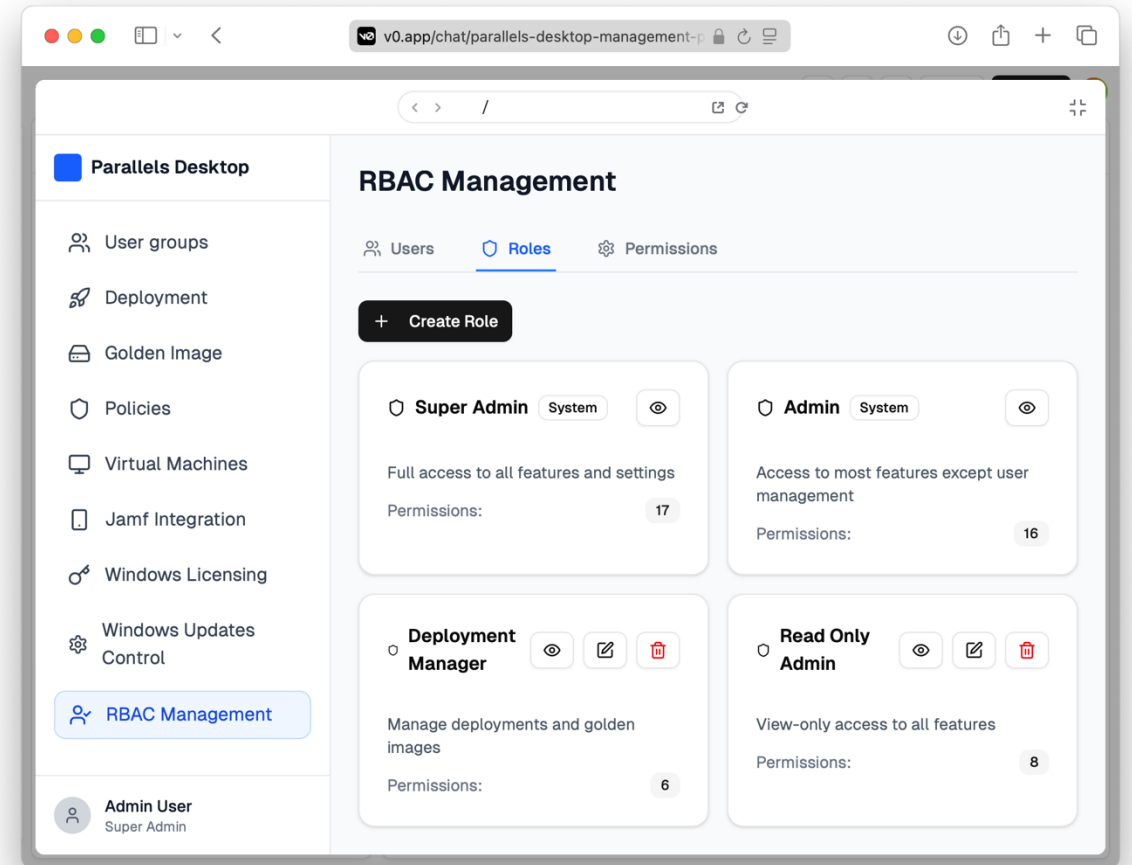

VM Security Now

- ✓ SOC2 certified
- ✓ VM capabilities centralized control – in progress
- ✓ Encryption for Win and Linux VMs tied to license
- PD pulls security restrictions from backend

VM Security Goals

- Pentesting
- Encryption for MacVMs
- Real-time control over PD and VMs
- RBAC for admins
- APIs and scaling
- Expand policies to limit apps in VMs
- Encryption of VMs based on MDM enrollment
- Lock VMs from future use
-

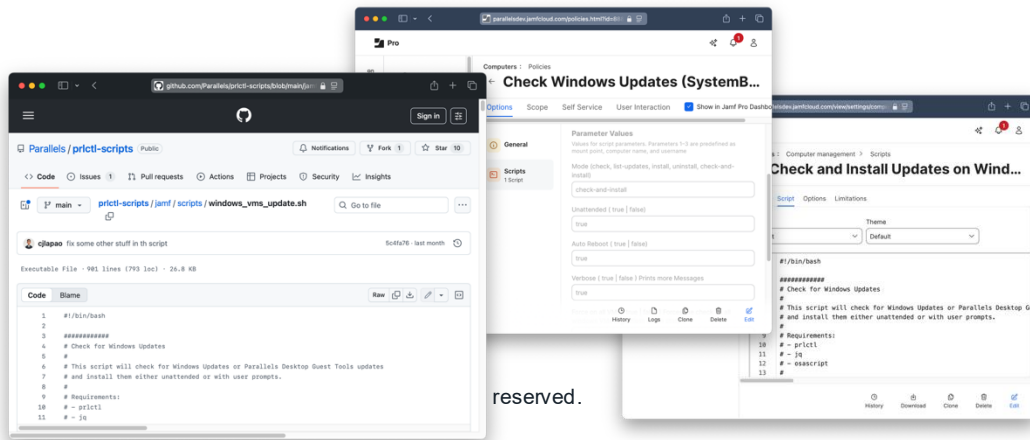

Windows Updates Control and Licensing Now

- Complex configuration, management and activation at scale
- Requires third party tools and additional infrastructure
- Expensive: Windows Pro (\$199.99) + Windows E3/E5 (\$90+/year)
- If not keeping Windows up-to-date - security issue

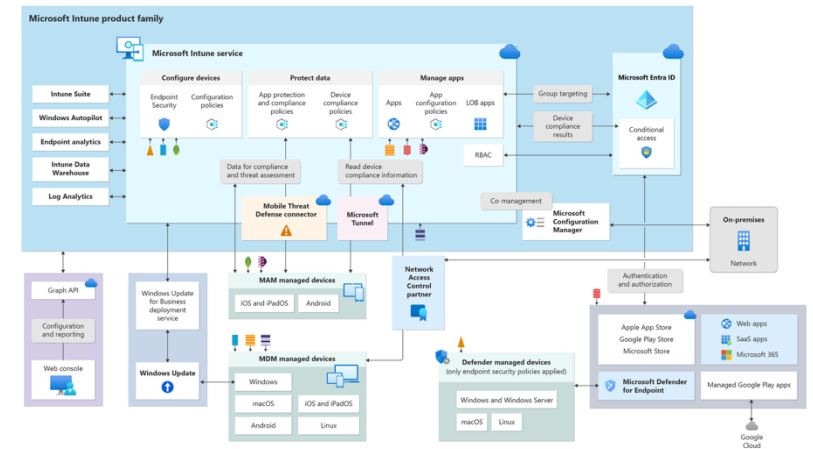

Jamf with Parallels scripts
(limited monitoring and control)

reserved.

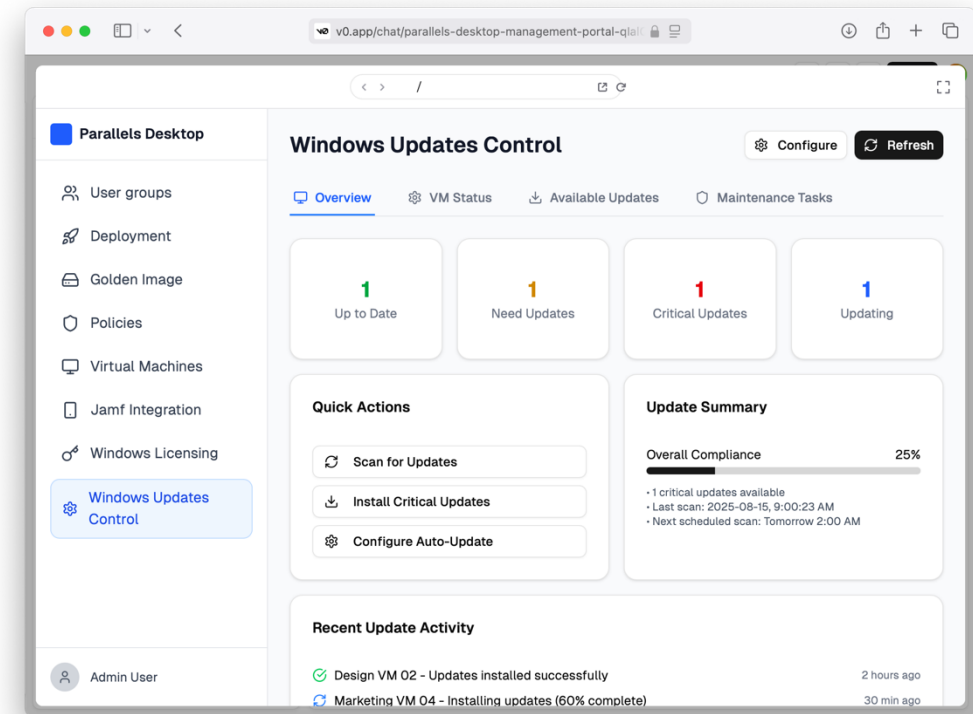

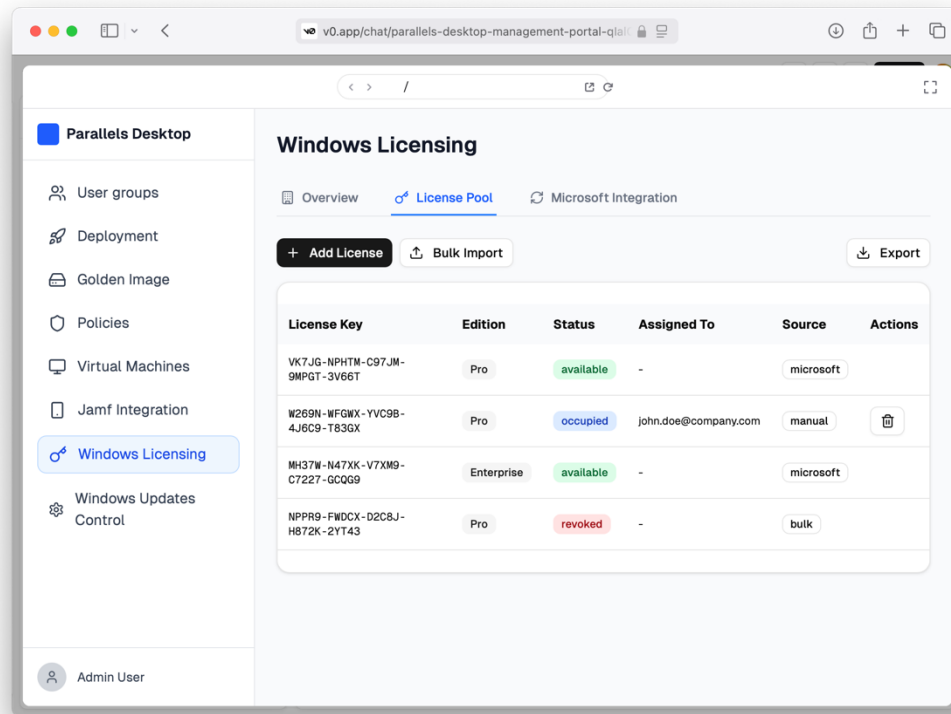

OR

Microsoft Intune
(Parallels Golden Images with sysprep)

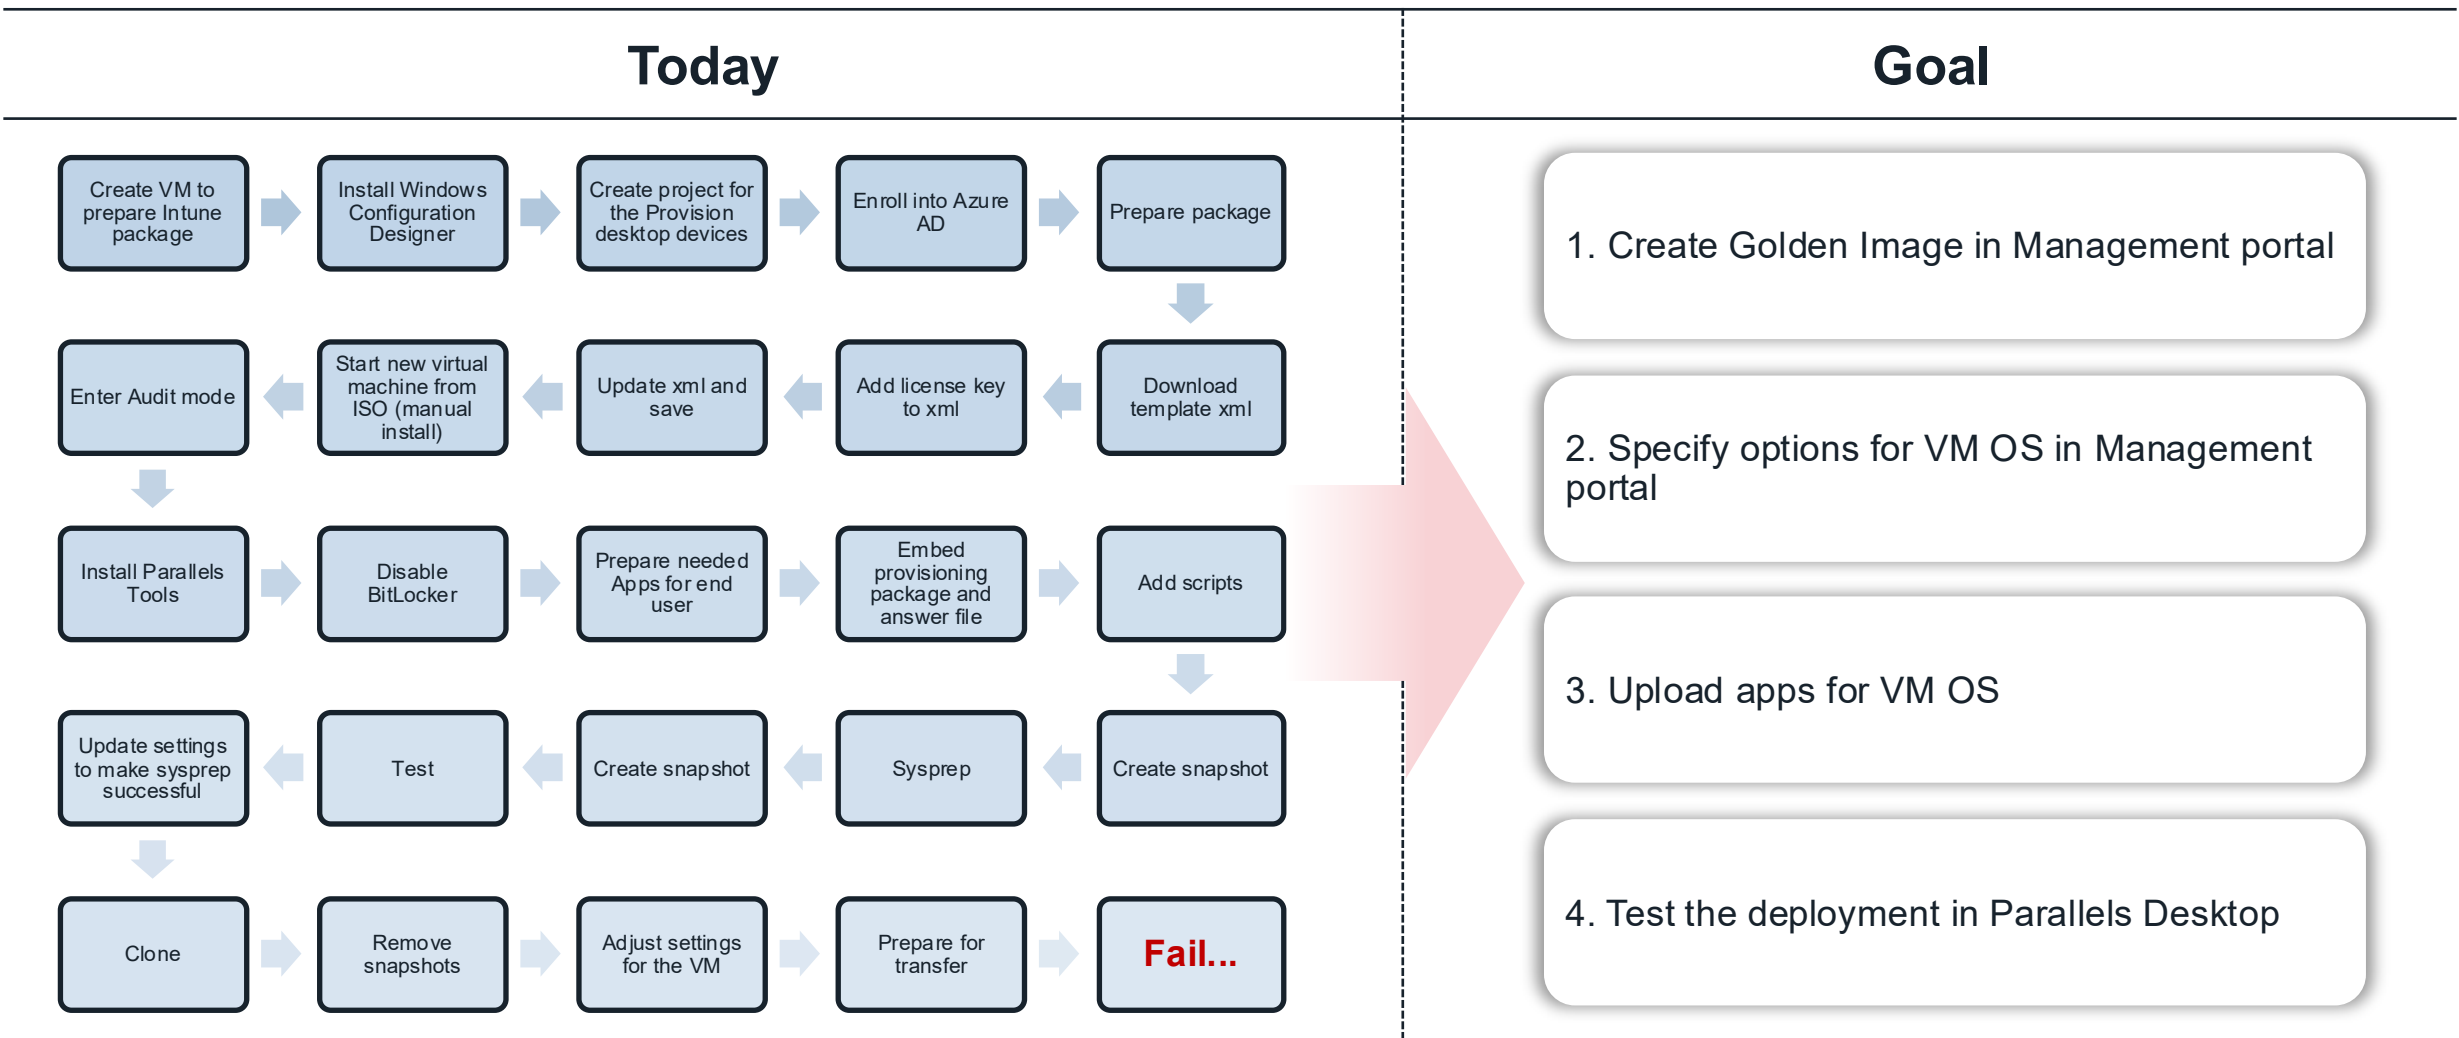

Windows Updates Control and Licensing Goal

- Automate Windows updates and activation of single Windows licenses in VMs
- Reduce admin costs by partnering with Microsoft

Applications

Review

Platform for VM OS

Select the operating system platform for your virtual machine

Windows

macOS

Linux

Windows Edition

Select the Windows edition (latest version will be downloaded automatically)

☒ Windows 11 Pro
Latest Windows version with enhanced security features

☐ Windows 11 Enterprise
Enterprise edition with advanced management features

☐ Custom ISO
Use your own Windows ISO files

☒ Activate Windows from license pool

☒ Enable unattended installation

☐ Configure OOBЕ from macOS information

☒ Create local user account based on macOS

☐ Hide Windows from user during installation

Supporting Files

Upload provisioning profiles, configuration files, scripts, and certificates

Enterprise Edition Roadmap

Partnerships with Apple, Microsoft,
MDM and SSO providers, app vendors

North Star: Manage applications, not Windows or Parallels

Security

SOC2, Pen-testing.
Real-time control, RBAC for
admins, APIs and scaling.

Expand policies to limit VMs or
apps in VMs capabilities

Lock and protect VMs data
using encryption (macVM, lock
from future use)

Windows Automation

Declarative Windows
deployment (instead of images)

Out-of-the-box Windows
maintenance in background

Windows licensing automation
(remove volume license
requirement)

Seamless App Delivery

Simplify and automate deployment and
management in the “Windows apps only”

Packaging
Security

B2B Q&A
